## Ubuntu install of ROS Melodic

We are building Debian packages for several Ubuntu platforms, listed below. These packages are more efficient than source-based builds and are our preferred installation method for Ubuntu. Note that there are also packages available from Ubuntu upstream. Please see [UpstreamPackages](#) to understand the difference.

Ubuntu packages are built for the following distros and architectures.

Distro	amd64	arm64	armhf
Artful	X		
Bionic	X	X	X

If you need to install from source (**not recommended**), please see [source \(download-and-compile\) installation instructions](#).

**If you rely on these packages, please support OSRF.**

These packages are built and hosted on infrastructure maintained and paid for by the [Open Source Robotics Foundation](#), a 501(c)(3) non-profit organization. If OSRF were to receive one penny for each downloaded package for just two months, we could cover our annual costs to manage, update, and host all of our online services. Please consider [donating to OSRF today](#).
